

Team Roles

While all three team members will be involved in core tasks of project design and implementation, we have set aside these three roles for each team member to take on individually:

Scheduler: (Nathaniel) Sets and communicates meeting times, reschedules meetings based on team schedule changes. Also schedules timelines for deliverables, and coordinates with team members to make sure things are on track.

Secondary Role: Maintains team process book

Librarian: (Jeremy) Collates and finalizes deliverables, submits them to instructors and copies other team members. Communicates with instructors with questions/issues about expectations for submissions. Keeps important artifacts well organized. Responds to requests for key artifacts from other team members.

Secondary Role: Chief Visualization Sketcher

Data Architect: (Bruno): Sources and aggregates our primary BLS data-set. Manages datasets in SQL database and exports data as needed custom formats to facilitate visualization in D3.

Secondary Role: Chief Poster designer
